

Function Related Problems (Total 26 questions)

SL	Problem statement	Difficulty levels								
1.	Function to print a custom message.	*								
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td></td><td>This is a function.</td></tr></table>		Sample input	Sample output		This is a function.				
	Sample input		Sample output							
	This is a function.									
2.	Function to print an input character value.	*								
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>3</td><td>Value received from main: 3</td></tr><tr><td>A</td><td>Value received from main: A</td></tr></table>		Sample input	Sample output	3	Value received from main: 3	A	Value received from main: A		
	Sample input		Sample output							
	3		Value received from main: 3							
A	Value received from main: A									
3.	Write a function in C that takes a float x as the parameter and returns the value of 1/x2.	*								
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>1.0</td><td>1.0</td></tr><tr><td>2.0</td><td>0.25</td></tr><tr><td>-3.5</td><td>0.081633</td></tr></table>		Sample input	Sample output	1.0	1.0	2.0	0.25	-3.5	0.081633
	Sample input		Sample output							
	1.0		1.0							
	2.0		0.25							
-3.5	0.081633									
4.	Write a function in C that takes two floats x and y as the parameters and returns the absolute value of their difference . You cannot use any library function.	*								
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>3.3 7.4</td><td>4.1</td></tr><tr><td>4.0 1.5</td><td>2.5</td></tr></table>		Sample input	Sample output	3.3 7.4	4.1	4.0 1.5	2.5		
	Sample input		Sample output							
	3.3 7.4		4.1							
4.0 1.5	2.5									
5.	Write the function greet that prints the message “Hello” n times.	*								
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>3</td><td>Hello Hello Hello</td></tr><tr><td>1</td><td>Hello</td></tr></table>		Sample input	Sample output	3	Hello Hello Hello	1	Hello		
	Sample input		Sample output							
	3		Hello Hello Hello							
1	Hello									

6.	Write the function greet that prints the desired output.	*						
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>2 4</td><td>Hello 2 Hello 3 Hello 4</td></tr><tr><td>3 7</td><td>Hello 3 Hello 4 Hello 5 Hello 6 Hello 7</td></tr></table>		Sample input	Sample output	2 4	Hello 2 Hello 3 Hello 4	3 7	Hello 3 Hello 4 Hello 5 Hello 6 Hello 7	
Sample input	Sample output							
2 4	Hello 2 Hello 3 Hello 4							
3 7	Hello 3 Hello 4 Hello 5 Hello 6 Hello 7							
7.	Write a function in C that takes the base and the height of a triangle as two float parameters and returns the area of the triangle . [Formula: Area = 0.5*base*height]	*						
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>2.0 5.0</td><td>5.0</td></tr><tr><td>4.25 4.0</td><td>8.5</td></tr></table>		Sample input	Sample output	2.0 5.0	5.0	4.25 4.0	8.5	
Sample input	Sample output							
2.0 5.0	5.0							
4.25 4.0	8.5							
8.	Function to calculate the sum of n numbers coming from the console.	*						
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>80 33 27</td><td>Sum In Function: 140 Sum In Main: 140</td></tr><tr><td>100 -100</td><td>Sum In Function: 0 Sum In Main: 0</td></tr></table>		Sample input	Sample output	80 33 27	Sum In Function: 140 Sum In Main: 140	100 -100	Sum In Function: 0 Sum In Main: 0	
Sample input	Sample output							
80 33 27	Sum In Function: 140 Sum In Main: 140							
100 -100	Sum In Function: 0 Sum In Main: 0							
9.	Function to calculate the sum of n numbers coming from the console and stored in an array.	*						
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>3 80 33 27</td><td>Sum In Function: 140 Sum In Main: 140</td></tr><tr><td>2 100 -100</td><td>Sum In Function: 0 Sum In Main: 0</td></tr></table>		Sample input	Sample output	3 80 33 27	Sum In Function: 140 Sum In Main: 140	2 100 -100	Sum In Function: 0 Sum In Main: 0	
Sample input	Sample output							
3 80 33 27	Sum In Function: 140 Sum In Main: 140							
2 100 -100	Sum In Function: 0 Sum In Main: 0							

10.	Function to swap two numbers. (Restriction: Pass by value)	*						
<table><tr><td>Sample input</td><td>Sample output</td></tr><tr><td>10 20</td><td>Value in func: 20 10 Value in main: 10 20</td></tr></table>		Sample input	Sample output	10 20	Value in func: 20 10 Value in main: 10 20			
Sample input	Sample output							
10 20	Value in func: 20 10 Value in main: 10 20							
11.	Function to swap two numbers. (Restriction: Pass by reference)	**						
<table><tr><td>Sample input</td><td>Sample output</td></tr><tr><td>10 20</td><td>Value in func: 20 10 Value in main: 20 10</td></tr></table>		Sample input	Sample output	10 20	Value in func: 20 10 Value in main: 20 10			
Sample input	Sample output							
10 20	Value in func: 20 10 Value in main: 20 10							
12.	Function to determine only even numbers in an array of input integers.	*						
<table><tr><td>Sample input</td><td>Sample output</td></tr><tr><td>24 77 117 -512 1024</td><td>24 -512 1024</td></tr><tr><td>45 33 0 256</td><td>0 256</td></tr></table>		Sample input	Sample output	24 77 117 -512 1024	24 -512 1024	45 33 0 256	0 256	
Sample input	Sample output							
24 77 117 -512 1024	24 -512 1024							
45 33 0 256	0 256							
13.	Function that finds and returns the minimum value in an array.	**						
<table><tr><td>Sample input</td><td>Sample output</td></tr><tr><td>157 -28 -37 26 10</td><td>Minimum Value: -37</td></tr><tr><td>12 45 1 10 5 3 22</td><td>Minimum Value: 1</td></tr></table>		Sample input	Sample output	157 -28 -37 26 10	Minimum Value: -37	12 45 1 10 5 3 22	Minimum Value: 1	
Sample input	Sample output							
157 -28 -37 26 10	Minimum Value: -37							
12 45 1 10 5 3 22	Minimum Value: 1							
14.	Function that multiplies the array elements by 2 and returns the array.	*						
<table><tr><td>Sample input</td><td>Sample output</td></tr><tr><td>157 -28 -37 26 10</td><td>314 -56 -74 52 20</td></tr><tr><td>12 45 1 10 5 3 22</td><td>24 90 2 20 10 6 44</td></tr></table>		Sample input	Sample output	157 -28 -37 26 10	314 -56 -74 52 20	12 45 1 10 5 3 22	24 90 2 20 10 6 44	
Sample input	Sample output							
157 -28 -37 26 10	314 -56 -74 52 20							
12 45 1 10 5 3 22	24 90 2 20 10 6 44							
15.	Function to sort and return an input array in ascending order.	**						
<table><tr><td>Sample input</td><td>Sample output</td></tr><tr><td>10 22 -5 117 0</td><td>-5 0 10 22 117</td></tr></table>		Sample input	Sample output	10 22 -5 117 0	-5 0 10 22 117			
Sample input	Sample output							
10 22 -5 117 0	-5 0 10 22 117							

16.	<p>Function “IsPrime()” to determine whether a number is prime or not.</p> <table><tr><th>Sample argument</th><th>Sample return value</th><th>Sample output in main</th></tr><tr><td>1</td><td>0</td><td>Not prime</td></tr><tr><td>2</td><td>1</td><td>Prime</td></tr><tr><td>11</td><td>1</td><td>Prime</td></tr><tr><td>39</td><td>0</td><td>Not prime</td></tr><tr><td>101</td><td>1</td><td>Prime</td></tr></table>	Sample argument	Sample return value	Sample output in main	1	0	Not prime	2	1	Prime	11	1	Prime	39	0	Not prime	101	1	Prime	**
Sample argument	Sample return value	Sample output in main																		
1	0	Not prime																		
2	1	Prime																		
11	1	Prime																		
39	0	Not prime																		
101	1	Prime																		
17.	<p>You will be given exactly five positive integers. For each of the numbers, say N. you will print the smallest prime that is greater than N.</p> <p><u>Additional Constraints:</u> You have to write and use the following functions.</p> <p>isPrime parameter: an integer. returns: 1 if the received integer is prime, 0 otherwise</p> <p>nextPrime parameter: an integer. returns: the smallest prime that is greater than the received integer. calls isPrime</p> <p>main reads 5 integers with scanf calls nextPrime</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>1</td><td>2</td></tr><tr><td>2</td><td>3</td></tr><tr><td>3</td><td>5</td></tr><tr><td>8</td><td>11</td></tr><tr><td>21</td><td>23</td></tr></table>	Sample input	Sample output	1	2	2	3	3	5	8	11	21	23	**						
Sample input	Sample output																			
1	2																			
2	3																			
3	5																			
8	11																			
21	23																			
18.	<p>Function “GeneratePrime()” to compute the prime numbers less than N, where N is an input integer. GeneratePrime() uses IsPrime() to check whether a number is prime or not.</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>5</td><td>Prime less than 5: 2, 3</td></tr><tr><td>10</td><td>Prime less than 10: 2, 3, 5, 7</td></tr><tr><td>40</td><td>Prime less than 17: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37</td></tr></table>	Sample input	Sample output	5	Prime less than 5: 2, 3	10	Prime less than 10: 2, 3, 5, 7	40	Prime less than 17: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37	***										
Sample input	Sample output																			
5	Prime less than 5: 2, 3																			
10	Prime less than 10: 2, 3, 5, 7																			
40	Prime less than 17: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37																			

19.	Function “ GenNthPrime() ” to compute the Nth prime number, where N is an integer input.	***								
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>5</td><td>5th Prime: 11</td></tr><tr><td>10</td><td>10th Prime: 29</td></tr><tr><td>40</td><td>40th Prime: 173</td></tr></table>		Sample input	Sample output	5	5th Prime: 11	10	10th Prime: 29	40	40th Prime: 173	
Sample input	Sample output									
5	5th Prime: 11									
10	10th Prime: 29									
40	40th Prime: 173									
20.	Program that takes two positive integers as inputs and uses two functions to find their GCD (greatest common divisor) and LCM (least common multiple). Both functions take parameters and returns desired values.	**								
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>5 7</td><td>GCD: 1 LCM: 35</td></tr><tr><td>12 12</td><td>GCD: 12 LCM: 12</td></tr><tr><td>12 32</td><td>GCD: 4 LCM: 96</td></tr></table>		Sample input	Sample output	5 7	GCD: 1 LCM: 35	12 12	GCD: 12 LCM: 12	12 32	GCD: 4 LCM: 96	
Sample input	Sample output									
5 7	GCD: 1 LCM: 35									
12 12	GCD: 12 LCM: 12									
12 32	GCD: 4 LCM: 96									
21.	Function find_substr() that takes two string arrays (a, b) as parameters, returns 1 if string b is found anywhere in string a , or returns 0 if no match is found. (Assuming, strlen(a)>strlen(b))	**								
<table><tr><th>Sample input (a, b)</th><th>Sample output</th></tr><tr><td>madam adam</td><td>1</td></tr><tr><td>telescope less</td><td>0</td></tr><tr><td>101010 101</td><td>1</td></tr></table>		Sample input (a, b)	Sample output	madam adam	1	telescope less	0	101010 101	1	
Sample input (a, b)	Sample output									
madam adam	1									
telescope less	0									
101010 101	1									
22.	Function find_substr() that takes two string arrays (a, b) as parameters, uses function str_length() to determine the lengths of the strings, and then looks for the smaller string anywhere in the bigger string. It returns 1 if the substring is found, or returns 0 if no match is found. [Restriction: str_length() cannot uses built-in strlen() function]	***								
<table><tr><th>Sample input (a, b)</th><th>Sample output</th></tr><tr><td>madam adam</td><td>1</td></tr><tr><td>telescope less</td><td>0</td></tr><tr><td>101010 101</td><td>1</td></tr></table>		Sample input (a, b)	Sample output	madam adam	1	telescope less	0	101010 101	1	
Sample input (a, b)	Sample output									
madam adam	1									
telescope less	0									
101010 101	1									

23.

Program that implements function to perform operations on a 3X5 matrix:

*InputMatrix()**ShowMatrix()**ScalarMultiply()*

Sample input	Sample output
7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 2	Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 Multiplied by 2: 14 32 110 26 24 24 20 104 0 14 -4 2 4 8 18
7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 -1	Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 Multiplied by -1: -7 -16 -55 -13 -12 -12 -10 -52 0 -7 2 -1 -2 -4 -9

24.	<div>Program that implements function to perform operations on a 3X5 matrix:</div> <div><i>InputMatrix()</i> <i>ShowMatrix()</i> <i>ScalarMultiply()</i></div> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>2 2 7 16 12 10 2</td><td>Original: 7 16 12 10 Multiplied by 2: 14 32 24 20</td></tr><tr><td>3 5 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 -1</td><td>Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 Multiplied by -1: -7 -16 -55 -13 -12 -12 -10 -52 0 -7 2 -1 -2 -4 -9</td></tr></table>	Sample input	Sample output	2 2 7 16 12 10 2	Original: 7 16 12 10 Multiplied by 2: 14 32 24 20	3 5 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 -1	Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 Multiplied by -1: -7 -16 -55 -13 -12 -12 -10 -52 0 -7 2 -1 -2 -4 -9	**
Sample input	Sample output							
2 2 7 16 12 10 2	Original: 7 16 12 10 Multiplied by 2: 14 32 24 20							
3 5 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 -1	Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9 Multiplied by -1: -7 -16 -55 -13 -12 -12 -10 -52 0 -7 2 -1 -2 -4 -9							
25.	<div>Implement the following functions and calculate standard deviation of an array whose values come from the terminal-</div> <div><i>TakeInput()</i> <i>CalcMean(array, num_of_elem)</i> <i>Calc_Std_deviation(array, num_of_elem)</i> $\sigma = \sqrt{\frac{\sum (x - M)^2}{N}}$</div> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>4 5 5 4 4 2 2 6</td><td>1.32</td></tr><tr><td>600 470 170 430 300</td><td>147.32</td></tr></table>	Sample input	Sample output	4 5 5 4 4 2 2 6	1.32	600 470 170 430 300	147.32	***
Sample input	Sample output							
4 5 5 4 4 2 2 6	1.32							
600 470 170 430 300	147.32							

26.

Program to convert a positive integer to another base using the following functions-

I. *Get_Number_And_Base* () : Takes number to be converted (N) and base value (B) from user. Base must be between 2 and 16.

II. *Convert_Number* () : Does the conversion

III. *Show_Converted_Number*() : Displays the converted value.

Sample input	Sample output
100 8	144
512 16	200
512 0	Base not within proper range!
